

iOS 17.4 Beta and timers, by Deborah

One of the intriguing features introduced by Apple that caught my attention is the enhanced ease with which we can manage our timers. Consider this scenario: you need to set timers for various occasions. Previously, you could only start a timer with the same duration as the one previously used, lacking a recent section for quick access.

Now, managing timers has become significantly more convenient. Apple now allows users to set multiple timers and ensures they are readily accessible in the recent section.

For those who prefer visual aids, the screenshot below displays the timers I have set, presented in Italian. Additionally, there are several other functions available, which I believe will serve your needs effectively.
